

# **Crawl Tunnel - 2&4ft**

## **Installation Instructions**

NOTES: Please check for any damage caused by the shipping company and take appropriate steps to file a claim, if needed.

\*Please call **Digsafe** and check for any underground utilities before digging anywhere.

### **Materials needed**

Spade shovel, garden rake, hand tamp, level.

### **Instructions**

1. Remove items from pallet/boxes. You should find one (1) fully assembled crawl tunnel.

\* Note: Crawl tunnel can be placed directly on the ground without any tools needed, or you can bury the two pieces of strapping on the bottom so it's not as rough on the kids knees as they're crawling through. Either way, the strapping is to prevent the sides from buckling, and should not be removed.

2. Move items and tools to desired installation location.

3. Mark the location of the two pieces of strapping on the bottom of each end of the crawl tunnel shown in Image 1.

4. Move the crawl tunnel out of the way, and excavate down one (1) inch so the top of the strapping is flush with or slightly below grade.

5. If you wish, you can level the crawl tunnel from front to back by adding or removing material under the sides of the tunnel.

6. Enjoy your Crawl Tunnel!
