Rope Climb

MRCF-RPU

Shipping Weight: 600 lbs
Shipping Dimensions: 156"L X 25"W X 14"H
Brand: Natural Playgrounds Company
Toxicity: child friendly wood preservative
Age Appropriateness: all ages

The Rope Climb has all kinds of applications, and exercises the body in many unique ways.

All the muscles in the upper body, hands, core, and legs are involved once the child grabs the rope and tries to pull their body up the incline while also trying to walk on the slope, especially because the hands are constantly changing positions as the child moves up the rope and up the incline.

This element is excellent for all age groups, as we can vary the length of the footboard, and the steepness can be varied as well. Typically, we use rope 1.25 inch in diameter (so that it cannot be made into a 3 inch loop, which is against safety regulations), and then we tether the rope at the bottom, and at the top, we run it through a post and knot it on the back side.

The main picture shows the way we typically construct this item; for this particular run of slide beside, it is approximately 8 feet long, so your Rope Climb would also be 8’ long, but we can vary this length depending on your incline.

We recommend installing this at an angle of 30-35º.

The Rope Climb comes as a kit. Complete installation instructions are, of course, included.
