Bug Hotel

BugH

Shipping Weight: 15 lbs
Shipping Dimensions: 26"L X 20"W X 6"H
Brand: Natural Playgrounds Company
Toxicity: non-toxic
Age Appropriateness: all ages

Our Bug Hotels provide a great way for children to see how insects live and work!!

Our Hotel is larger than most, consisting of 8 large breeding and nesting chambers for wild bees, butterflies, ladybugs and other beneficial insects. The hotel offers them shelter or refuge, particularly during winter.

Bug Hotels offer hosting for pollinators, which are critical for transferring pollen in and between flowers of the same species, and that leads to fertilization and successful seed and fruit production for plants. Pollination ensures that a plant will produce full-bodied fruit and a full set of viable seeds.

Bug hotels are also used as nest sites by insects which drag prey to the nest where an egg is deposited, or they allow insects, such as ladybugs and butterflies, to hibernate.

Bug hotels are popular among gardeners and fruit and vegetable growers due to their role encouraging insect pollination, so introducing an bug hotel into a habitat provides extremely valuable housing for beneficial insects!!

Impacts can be seen in the form of better soil quality, increased pollination, elevated ecosystem diversity, and reductions in the populations of detrimental insects.

Get one or more for your garden!

Hotel measures ~ 12” wide x 22.5” high x 3.5” deep.

Bug hotels should face east or southeast to get full morning sun, and they should be mounted 5-8 feet above the ground. Mounting instructions and hardware are included.
